### ***Nova5000 White Paper Now Available***

AUSTIN, TEXAS (Jan. 25, 2006) – Fourier Systems made a splash at NECC 2005 by unveiling the revolutionary *Nova5000*, a new computing device designed specifically for school use at a price point affordable for one-to-one student computing. Unlike most tablet computers and other such devices, the *Nova5000* has not been “repurposed” from the business market.

A new white paper details how the *Nova5000* will change the learning experience for students. The paper addresses how the device was developed specifically for use in schools, and what the middle school and high school applications of the product are. This insightful new white paper is available for free download at [www.fourier-sys.com](http://www.fourier-sys.com).

#### **About Fourier Systems, Inc.**

Established in 1989, Fourier is a world leader in the manufacture and distribution of compact portable data logging devices and accessories for the education market. The company’s science kits continue to push the standards of science education higher, now in over 30 countries around the world. With the wide range of sensors, user-friendly software and relevant curriculum material, Fourier’s products demonstrate a commitment to high quality. Fourier has earned accolades both nationally and internationally, including the Worlddidac award for the EcoLog™ and ExperiNet™. For more information, visit [www.fourier-sys.com](http://www.fourier-sys.com) or phone 866-352-6994.
