Fourier Develops New Math Experiment Book For Students

AUSTIN, TEXAS (February 22, 2006) – During the State of the Union Address last month, President Bush announced a new proposal entitled the American Competitiveness Initiative. Many American students, especially minorities and high school students, are lagging behind the rest of the world in science and math achievement. In an effort to reverse this trend, Bush requested funds in his 2007 budget to improve both science and math instruction.

To help students overcome difficulties in math and science, Fourier Systems has created a new *Math Experiment Book* containing 15 easy-to-follow activities for students. Hands-on science activities enable students to learn algebra algorithms and exponents, as well explore real-life applications in physics, biology and chemistry. The new *Fourier Math Experiment Book* helps students master algebraic concepts, which in turn aids science comprehension.

About Fourier Systems, Inc.

Established in 1989, Fourier is a world leader in the manufacture and distribution of compact portable data logging devices and accessories for the education market. The company's science kits continue to push the standards of science education higher, now in over 30 countries around the world. With the wide range of sensors, user-friendly software and relevant curriculum material, Fourier's products demonstrate a commitment to high quality. Fourier has earned accolades both nationally and internationally, including the Worlddidac award for the EcoLog™ and ExperiNet™. For more information, visit www.fourier-sys.com or phone 866-352-6994.
