

Lightspeed Systems Product and Services Overview

Lightspeed Systems develops innovative network security and management software that helps schools operate their networks effectively and efficiently, while ensuring a safe and secure 21st century learning environment.

The company's main product, **Total Traffic Control**, is a comprehensive school network security and management application with a full range of features that simplify IT administration and provide a single, cost-effective solution. Total Traffic Control combines content filtering, mobile filtering, spam management, bandwidth management, antivirus protection, e-mail archiving, desktop and gateway security, and extensive reporting capabilities. The software can be customized to fit a school's unique needs, and deployed on any number of servers and desktops under a single license. The component products that comprise Total Traffic Control (Email Manager, Security Manager, Web Access Manager, and Network Traffic Manager) can also be purchased individually, or in tailored bundles.

Power Manager, a recent addition to Lightspeed Systems' portfolio of products, is automated energy conservation software that enables school and district IT staff to easily manage, reduce and report on energy use and costs for all the computers on their networks. Lightspeed Systems Power Manager helps schools and districts save money and minimize energy waste.

Through a partnership with Vericept Corporation, Lightspeed Systems offers **Vericept Monitor™**, network monitoring and data loss prevention software. Providing deep content inspection for all Internet-based communications and attachments, Vericept gives administrators insight into risky network activity, such as the use of anonymous proxies for URL filter avoidance, or the inappropriate use of Web-based mail, social networking sites, and instant messaging. Vericept identifies the misuse of student records and personal information that may place a school at risk of non-compliance with federal and state privacy laws, such as the Family Educational Rights and Privacy Act (FERPA).

Among its support services, Lightspeed Systems offers a professional training certification program for network administrators. After completing the course requirements and passing course exams, network administrators become Total Traffic Control Certified Administrators, a valuable designation for career advancement. Training classes are offered monthly, and five-day workshops are provided periodically throughout the year in multiple locations.

In addition, Lightspeed Systems continually updates its databases of Web sites, known viruses, "malware," and more to ensure up-to-date network security and content safety. The company is committed to categorizing and rating as much of the Internet as possible, and making it available for anyone to access at www.eRating.com. For more information, call 661-716-7600, or visit www.lightspeedsystems.com.
